Problem Statement

Enterprise Resource Planned Like Web Platform for Management of Student Clubs at SiliconTech

Due to a lack of communication between clubs, they often face event collisions, which can result in students not being able to benefit from all the clubs.

In colleges, there are too many clubs, which can make it difficult for students to find what they need. This is because all the messages are sent to WhatsApp, where many different types of information can get mixed up together.

Proposed Solution

- We will be implementing a website, with complete Login/Management system for all students.
 - It will have all the clubs listed, you can view their upcoming events, directly register & for clubs, they can easily get information about which rooms are already booked, how many students are present in their club, how many actually attended all digital instead of on paper attendance.
 - Later, we will allow clubs to create their website just by submitting photos and texts and a common template will be generated so that they can be easily maintained and updated by even newcomers.
- Silicon clubs lack digital awareness and this will definitely help.
